

## ABSTRACT

A golf ball comprises a large number of dimples (4) on a surface thereof. The dimple (4) includes a first curved surface (7) provided from a position (P2) placed downward by 85% of a depth to a position (P1) placed downward by 100% of the depth in a direction of the depth from an edge (E) and a second curved surface (8) provided from a position (P5) placed downward by 20% of the depth to a position (P3) placed downward by 50% of the depth in the direction of the depth from the edge (E). A percentage, to a total number of the dimples, of a number of the dimples in which a ratio ( $R1/R2$ ) of a radius of curvature ( $R1$ ) of the first curved surface (7) to a radius of curvature ( $R2$ ) of the second curved surface (8) is 5 to 55 is 20% or more. A third curved surface (9) is present between the first curved surface (7) and the second curved surface (8). A fourth curved surface (10) is present between the second curved surface (8) and the edge (E). A distance (F) between the deepest portion (P2) of the dimple (4) and a phantom sphere (6) is 0.10 mm to 0.60 mm.
